PERGAMON

TELECOMMUNICATIONS POLICY

The International Journal on Knowledge Infrastructure Development, Management and Regulation

Telecommunications Policy is concerned with the changing roles of telecommunications in the economy and society. It provides a forum for research and debate amongst academics, policymakers, regulators, industry managers, consultants and other professionals. Its orientation is multidisciplinary and international, encompassing issues of both theory and practice. Its scope includes issues of telecom reform at national, regional and international levels, including issues confronting both developed and developing countries. It pays particular attention to the implications of convergence for knowledge infrastructure development, management and regulation.
